5) A/C manufacturing Site where Finished A/C outdoor units are ready to Dispatch. (Dedicated Manufacturing unit to cater Voltas) .

6) Sample product of newly launched Commercial Refrigeration.

7) Sample product of newly launched Water Dispenser.

Key takeaways from plant visit:

1. During our visit to VOEPL, we witnessed the management's prowess for the industry. Mr. Sajid Shaikh, the CFO, guided us through various company units in Nashik. We also had the opportunity to meet Mr. K. Ramesh, the factory head, who provided comprehensive insights into the production processes and assembly lines.
2. We gained a comprehensive understanding of the A/C manufacturing process, including both Indoor and Outdoor Units. We learned about the company's strategic backward integration, minimizing external sourcing of components. Over the years, VOEPL has achieved significant backward integration, and they are actively working through their R&D facility to further reduce reliance on external sources.
3. VOEPL's major clients include Voltas (A/C Division) and Panasonic (LED Lighting Division). Their products are dispatched regularly, and once the dispatch is completed, VOEPL assumes no responsibility for any external challenges that may arise.
4. We explored the company's new products, namely the Water Dispenser and Commercial Refrigeration. Despite being sample batches with potential future upgrades, our experience suggests that VOEPL's products are top-notch, rivaling those of well-established A-class companies with years of experience in these product categories.
